

## **Abstract**

The doctoral thesis *Information design in public transit systems* focuses on information used for orientation and navigation in public spaces. Information is discussed in relations to urban design, architecture and cognition and over 100 examples are presented with a special attention to transportation systems. The information design tenets are provided and applied to one of the Prague subway stations.

## **Keywords**

Information design, information system, environmental graphic design, wayfinding, public transit, subway.
